

Measure Descriptions:

No Alcohol Use - Percentage of consumers who reported no alcohol use in the month before treatment versus during treatment.
No Drug Use - Percentage of consumers who reported no drug use, not including alcohol, in the month before treatment versus during treatment.

Initial Interviews compared to Selected Update Interviews for the same consumers. NC-TOPPS Outcomes at a Glance 2.0 reports provide key outcome measures for substance use disorder and mental health consumers. Based on the outcome measure selected, only the appropriate consumer groups are available. The user must select one of these and then click Generate Report. The data for the NC-TOPPS Outcomes at a Glance 2.0 reports are based on consumers' completed Updates in the most recent six or twelve months. For example, an NC-TOPPS Outcomes at a Glance 2.0 report generated in the month of June will include data from Updates completed from December 1, 2009 through May 31, 2010. Please note NC-TOPPS Outcomes at a Glance 2.0 reports will not be displayed on any outcome measure where the number of cases is less than 10.
